ICITech 2017 <icitech2017-chairs@edas.info> 9/29/17
 to me, Lukas, Adang, Boy, Widodo, Edi

Dear Mr. Bambang Triwijoyo:

On behalf of the Organizing Committee of ICITech 2017, we are very pleased to inform that – your paper #1570395977 ('Retina Disease Classification Based on Colour Fundus Images Using Convolutional Neural Networks') – has been accepted for publication and oral presentation.

Please revise your paper according to the reviewer comments and submit the revised paper by October 13, 2017.

The reviews are below:

Reviewer 1

- 1.Half significant but still got some idea.
- 2.Regarding TABLE III, is the results from other papers are true? Since all methods only capable to detect one but their methods 15? Please clarify and show the proof as well as evidence of the experiment etc. In my opinion this results probably very doubt.
- 3.Still at TABLE III, why not compare the performance with the same database i.e. STARE for all methods? Otherwise the main result is not valid.

Reviewer 2

- 1.The approach is good, but the accuracy is not adequate to be used in clinical purposes.
- 2.Please check the guideline for IEEE conference format paper for improving your paper format

Reviewer 3

- 1.The paper is of high quality. It is easy to read and appreciate the value of the paper.
- 2.Some expressions of the paper need to be improved so that can help readers to understand your contributions.

Sincerely yours,

The conference chairs
